CENTURION AUTOMATIC DOME

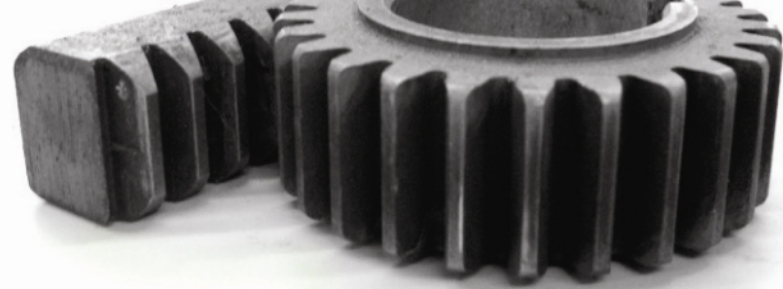

BEALL PNEUMATIC

With Beall's automatic dome lid your driver won't have to climb onto the top of the trailer to manually open and close the lids. Keeping the driver off the trailer reduces both the likelihood of an accident and the loading and unloading time. Ease of operation, fewer moving parts, and less maintenance make this lid a "must have".

Shield and protect your valuable assets with a Centurion by Beall Corporation

The Centurion has been designed to protect you and your dry bulk cargo. No need to climb ladders and catwalks to open and close fill covers. Operate a single switch housed in a protective box from the ground and watch the cover open and close. There are no required electrical connections and the trailer supplies the air pressure to inflate the seal and swing the cover. To operate, simply flip the switch to deflate the seal and then again to open the cover; after loading, flip the switch to close and the cover will swing closed and the seal will pressurize. The Centurion is a heavy duty cast aluminum cover, collar and gearbox. The cast aluminum gearbox houses a rack and pinion with dual bearings which supports and rotates the cover. Beall Corporation has developed the Centurion to protect not only your cargo, but also your drivers.

- **The Centurion protects your load and your driver**
- **No need to access the top of the tank, just stand on the ground and watch it work**
- **Operates off your trailer air supply**
- **Cover swing operated at standard trailer air pressure**
- **Pressure gauge allows the operator to know if the seal is pressurized**
- **Heavy duty aluminum collar and cover**
- **Cast aluminum gearbox with dual bearing, rack and pinion design**
- **Single switch; simple operation**
- **Protective operator box for valves and switch, located for ease of operation**
- **Durable air valves and standard air fittings for life in the trucking business**
- **No required electrical connection, the system is completely air operated**
